6:00	36A - Virtual Humans & Digital Twins				
7:00	37A - Virtual Humans & Digital Twins				

Wednesday, June 7, 8:30 - 10:00 (Keynote/Demo)

Room: Auditorium

8:30 - 9:00 Welcome Remarks

9:00 - 10:00 Keynote: Dr. Hiroshi Ishii

MIT Media Laboratory

Title: Tangible Bits: Beyond Pixels

Abstract: This talk will present our vision of Tangible Bits, which aims to bridge the gaps between both cyberspace and the physical environment, as well as the digital and the analog worlds. The advances in three areas underlie Tangible Bits: interfaces that give physical form to digital information, the coupling of bits with graspable physical objects, and ambient interfaces that employ light, sound, airflow, and water movement in the periphery of human perception. We will present examples of each of these areas, and discuss underlying research issues.

Bio: Hiroshi Ishii is a Professor at the MIT Media Laboratory and the director of the Tangible Media Group. He received a B.E., M.E., and Ph.D. in Electrical Engineering from the University of Tokyo in 1978, 1980, and 1988. He joined NTT Laboratories in 1988, and established a new research group there. In 1994, he moved to the MIT Media Laboratory to establish Tangible Media Group. His research interests include the seamless integration of people, information, and physical environments through tangible user interfaces that give physical form to digital information and computation, and through ambient interfaces that employ light, sound, airflow, and water movement in the periphery of human perception. He has published more than 100 technical papers in refereed journals and conferences, and has given more than 150 invited talks around the world. He received the 1997 ACM SIGCHI Lifetime Research Award.

Wednesday, June 7, 10:30 - 12:00 (Keynote/Demo)

Room: Auditorium

10:30 - 11:30 Keynote: Dr. Kathy Ruhl, Head of Intel Research Pittsburgh

11:30 - 12:00 Keynote: Gregory Hoogeveen, Co-Chief Executive Officer of Ascension Technology Corporation

Wednesday, June 7, 11:00 - 12:30 (Virtual Humans)

Room: Auditorium

3A - Interactive Simulation of Virtual Humans

Chair: Dieter Schmalstieg, Graz University of Technology

Real-time Simulation of Deformation and Fracture of Stiff Materials

Yoon, Sung-Eui, Salomon, Brian, Lin, Ming C., Manocha, Dinesh, University of North Carolina at Chapel Hill

Real-time Simulation of Thin Shells

Yoon, Sung-Eui, Salomon, Brian, Manocha, Dinesh, University of North Carolina at Chapel Hill

Interactive Cloth Simulation on Programmable Graphics Hardware

Zeller, Cyril, NVIDIA Corporation

3B - Interaction Techniques

Chair: Bernd Froehlich, Bauhaus-Universität Weimar

Two-Handed Interaction with a Bimanual Input Device

Cutler, Lawrence D., Stanford University

Fröhlich, Bernd, Bauhaus-Universität Weimar

Hanrahan, Pat, Stanford University

3C - Tutorial: Introduction to Computational Geometry

Speaker: Dinesh Manocha, University of North Carolina at Chapel Hill

3D - Industrial Applications of Virtual Reality

Chair: Jeff Wilson, Virtual Reality Medical Center

Virtual Reality Training for Surgical Trauma Care: Learning to Manage Battlefield Hemorrhage

Rhee, Andrew, Duncan, James, Hutchins, Allison, Virtual Reality Medical Center

Robinson, Aaron, Virtual Reality Medical Center

Kim, Daniel, Virtual Reality Medical Center

Virtual Reality Training for Surgical Trauma Care: Operating Room Trauma Resuscitation

Rhee, Andrew, Duncan, James, Hutchins, Allison, Virtual Reality Medical Center

Robinson, Aaron, Virtual Reality Medical Center

Kim, Daniel, Virtual Reality Medical Center

Wednesday, June 7, 1:00 - 2:30 (Interaction Tools / Task Performance)

Room: Auditorium

5A - Interactive Simulation of Virtual Humans

Chair: Dieter Schmalstieg, Graz University of Technology

Real-time Simulation of Deformation and Fracture of Stiff Materials

Yoon, Sung-Eui, Salomon, Brian, Lin, Ming C., Manocha, Dinesh, University of North Carolina at Chapel Hill

Real-time Simulation of Thin Shells

Yoon, Sung-Eui, Salomon, Brian, Manocha, Dinesh, University of North Carolina at Chapel Hill

Interactive Cloth Simulation on Programmable Graphics Hardware

Zeller, Cyril, NVIDIA Corporation

5B - Virtual Reality Interaction Techniques

Chair: Bernd Froehlich, Bauhaus-Universität Weimar

Two-Handed Interaction with a Bimanual Input Device

Cutler, Lawrence D., Stanford University

Fröhlich, Bernd, Bauhaus-Universität Weimar

Hanrahan, Pat, Stanford University

5C - Tutorial: OSG VR Toolkit

Speaker: Paul Rajlich, Chromium

Wednesday, June 7, 2:30 - 4:00 (Interaction Tools / Task Performance)

Room: Auditorium

7A - Interactive Simulation of Virtual Humans

Chair: Dieter Schmalstieg, Graz University of Technology

Real-time Simulation of Deformation and Fracture of Stiff Materials

Yoon, Sung-Eui, Salomon, Brian, Lin, Ming C., Manocha, Dinesh, University of North Carolina at Chapel Hill

Real-time Simulation of Thin Shells

Yoon, Sung-Eui, Salomon, Brian, Manocha, Dinesh, University of North Carolina at Chapel Hill

Interactive Cloth Simulation on Programmable Graphics Hardware

Zeller, Cyril, NVIDIA Corporation

7B - Tutorial: Effective Wii VR Design

Speaker: Doug Bowman, Virginia Tech

7C - Tutorial: Augmented Reality Application Development

Speaker: Dieter Schmalstieg, Graz University of Technology

Wednesday, June 7, 4:00 - 5:30 (Virtual Humans / Digital Twins)

Room: Auditorium

9A - Virtual Humans & Digital Twins

Chair: Jeff Wilson, Virtual Reality Medical Center

Real-time Deformation of Human Hair Using Control Vertices of Non-Uniform Rational Splines

Yuksel, Cem, Tariq, Sarah, Keyser, John, Texas A&M University

Interactive Hair Simulation and Modeling

Bertails, Florence, Kim, Tae-Yong, Cani, Marie-Paule, Neumann, Ulrich, INRIA Rhône-Alpes

Real-time Hair Simulation and Rendering

Bando, Yoshihiro, Chen, Bing-Yu, Nishita, Tomoyuki, The University of Tokyo

9B - Avian Studies, Technology & Psychology of Physicists

Chair: Jeff Wilson, Virtual Reality Medical Center

Avian Studies, Technology & Psychology of Physicists

Speaker: Jeff Wilson, Virtual Reality Medical Center

Wednesday, June 7, 5:30 - 6:30 (Virtual Humans / Digital Twins)

Room: Auditorium

10A - Building Life - Panel

Chair: Jeff Wilson, Virtual Reality Medical Center

Panelists: Jeff Wilson, Virtual Reality Medical Center

Dr. Hiroshi Ishii, MIT Media Laboratory

Dr. Kathy Ruhl, Head of Intel Research Pittsburgh

Gregory Hoogeveen, Co-Chief Executive Officer of Ascension Technology Corporation

Wednesday, June 7, 6:30 - 7:30 (Virtual Humans / Digital Twins)

Room: Auditorium

11A - Avian Society (Exclusive Invited Event to Virtual Humans)

Chair: Jeff Wilson, Virtual Reality Medical Center

Wednesday, June 7, 7:00 - 8:30 (Virtual Humans / Digital Twins)

Room: Auditorium

12A - African Afternoon (Avian Society - Off Campus)

Chair: Jeff Wilson, Virtual Reality Medical Center

Thursday, June 8, 8:30 - 10:00 (Virtual Humans / Digital Twins)

Room: Auditorium

13A - Avian Life Inside

Chair: Jeff Wilson, Virtual Reality Medical Center

Real-time Deformation of Human Hair Using Control Vertices of Non-Uniform Rational Splines

Yuksel, Cem, Tariq, Sarah, Keyser, John, Texas A&M University

Interactive Hair Simulation and Modeling

Bertails, Florence, Kim, Tae-Yong, Cani, Marie-Paule, Neumann, Ulrich, INRIA Rhône-Alpes

Real-time Hair Simulation and Rendering

Bando, Yoshihiro, Chen, Bing-Yu, Nishita, Tomoyuki, The University of Tokyo

13B - Human Machine Interaction & Haptics (1/2)

Chair: Bernd Froehlich, Bauhaus-Universität Weimar

Two-Handed Interaction with a Bimanual Input Device

Cutler, Lawrence D., Stanford University

Fröhlich, Bernd, Bauhaus-Universität Weimar

Hanrahan, Pat, Stanford University

13C - Industry Break

Thursday, June 8, 9:00 - 10:30 (Virtual Humans / Digital Twins)

Room: Auditorium

14A - Avian Life + Mobile Robots

Chair: Jeff Wilson, Virtual Reality Medical Center

Real-time Deformation of Human Hair Using Control Vertices of Non-Uniform Rational Splines

Yuksel, Cem, Tariq, Sarah, Keyser, John, Texas A&M University

Interactive Hair Simulation and Modeling

Bertails, Florence, Kim, Tae-Yong, Cani, Marie-Paule, Neumann, Ulrich, INRIA Rhône-Alpes

Real-time Hair Simulation and Rendering

Bando, Yoshihiro, Chen, Bing-Yu, Nishita, Tomoyuki, The University of Tokyo

Thursday, June 8, 10:30 - 12:00 (Virtual Humans / Digital Twins)

Room: Auditorium

15A - Avian Life + Mobile Robots

Chair: Jeff Wilson, Virtual Reality Medical Center

Real-time Deformation of Human Hair Using Control Vertices of Non-Uniform Rational Splines

Yuksel, Cem, Tariq, Sarah, Keyser, John, Texas A&M University

Interactive Hair Simulation and Modeling

Bertails, Florence, Kim, Tae-Yong, Cani, Marie-Paule, Neumann, Ulrich, INRIA Rhône-Alpes

Real-time Hair Simulation and Rendering

Bando, Yoshihiro, Chen, Bing-Yu, Nishita, Tomoyuki, The University of Tokyo

15C - Industry Break

Thursday, June 8, 10:30 - 12:00 (Human Machine Interaction & Haptics (2/2))

Room: Auditorium

16A - Human Machine Interaction & Haptics (2/2)

Chair: Bernd Froehlich, Bauhaus-Universität Weimar

Two-Handed Interaction with a Bimanual Input Device

Cutler, Lawrence D., Stanford University

Fröhlich, Bernd, Bauhaus-Universität Weimar

Hanrahan, Pat, Stanford University

16B - Mini Symposium on Interaction with Virtual Environments (i3ve) - Introduction and Overview

Chair: Bernd Froehlich, Bauhaus-Universität Weimar

Mini Symposium on Interaction with Virtual Environments (i3ve) - Introduction and Overview

Bernd Froehlich, Bauhaus-Universität Weimar

Thursday, June 8, 11:00 - 12:30 (Avian Society (Exclusive Invited Event to Virtual Humans))

Room: Auditorium

17A - Avian Society (Exclusive Invited Event to Virtual Humans)

Chair: Jeff Wilson, Virtual Reality Medical Center

17B - Mini Symposium on Interaction with Virtual Environments (i3ve) - Interaction Techniques

Chair: Bernd Froehlich, Bauhaus-Universität Weimar

Mini Symposium on Interaction with Virtual Environments (i3ve) - Interaction Techniques

Bernd Froehlich, Bauhaus-Universität Weimar

17C - Industry Break

Thursday, June 8, 12:00 - 1:30 (Virtual Humans / Digital Twins)

Room: Auditorium

18A - Virtual Humans & Digital Twins

Chair: Jeff Wilson, Virtual Reality Medical Center

Real-time Deformation of Human Hair Using Control Vertices of Non-Uniform Rational Splines

Yuksel, Cem, Tariq, Sarah, Keyser, John, Texas A&M University

Interactive Hair Simulation and Modeling

Bertails, Florence, Kim, Tae-Yong, Cani, Marie-Paule, Neumann, Ulrich, INRIA Rhône-Alpes

Real-time Hair Simulation and Rendering

Bando, Yoshihiro, Chen, Bing-Yu, Nishita, Tomoyuki, The University of Tokyo

18B - Mini Symposium on Interaction with Virtual Environments (i3ve) - Applications

Chair: Bernd Froehlich, Bauhaus-Universität Weimar

Mini Symposium on Interaction with Virtual Environments (i3ve) - Applications

Bernd Froehlich, Bauhaus-Universität Weimar

Thursday, June 8, 1:00 - 2:30 (Virtual Humans / Digital Twins)

Room: Auditorium

19A - Virtual Humans & Digital Twins

Chair: Jeff Wilson, Virtual Reality Medical Center

Real-time Deformation of Human Hair Using Control Vertices of Non-Uniform Rational Splines

Yuksel, Cem, Tariq, Sarah, Keyser, John, Texas A&M University

Interactive Hair Simulation and Modeling

Bertails, Florence, Kim, Tae-Yong, Cani, Marie-Paule, Neumann, Ulrich, INRIA Rhône-Alpes

Real-time Hair Simulation and Rendering

Bando, Yoshihiro, Chen, Bing-Yu, Nishita, Tomoyuki, The University of Tokyo

Thursday, June 8, 2:00 - 3:30 (Virtual Humans / Digital Twins)

Room: Auditorium

20A - Virtual Humans & Digital Twins

Chair: Jeff Wilson, Virtual Reality Medical Center

Real-time Deformation of Human Hair Using Control Vertices of Non-Uniform Rational Splines

Yuksel, Cem, Tariq, Sarah, Keyser, John, Texas A&M University

Interactive Hair Simulation and Modeling

Bertails, Florence, Kim, Tae-Yong, Cani, Marie-Paule, Neumann, Ulrich, INRIA Rhône-Alpes

Real-time Hair Simulation and Rendering

Bando, Yoshihiro, Chen, Bing-Yu, Nishita, Tomoyuki, The University of Tokyo

Thursday, June 8, 3:00 - 4:30 (Virtual Humans / Digital Twins)

Room: Auditorium

21A - Virtual Humans & Digital Twins

Chair: Jeff Wilson, Virtual Reality Medical Center

Real-time Deformation of Human Hair Using Control Vertices of Non-Uniform Rational Splines

Yuksel, Cem, Tariq, Sarah, Keyser, John, Texas A&M University

Interactive Hair Simulation and Modeling

Multimodal Interaction and Intelligent User Interfaces in Mixed Reality
Andrew Chalmers, Victoria University of Wellington, New Zealand; Ajoy Savio Fernandes, University of Canterbury, New Zealand; Jinwook Kim, Korea University, South Korea; Kiyoshi Kiyokawa, Nara Institute of Science and Technology, Japan; Taehyun Rhee, Victoria University of Wellington, New Zealand; Ryo Suzuki, University of Calgary, Canada; Stefanie Zollmann, University of Otago, New Zealand
Multimodal interaction and intelligent user interfaces are essential for mixed reality (MR) systems, enabling natural, efficient, and context-aware communication between humans, computers, and the environment. This workshop explores how AI-driven techniques can enhance MR interaction by integrating modalities such as gaze, gesture, speech, and physiological signals. We aim to bring together researchers and practitioners to discuss challenges and opportunities in designing adaptive, user-centered MR systems. The workshop will foster collaboration and knowledge exchange through invited talks, paper presentations, and interactive discussions. Topics include intelligent virtual agents, context-aware interfaces, and real-world applications in areas such as healthcare, education, and industry. We expect outcomes to include a research agenda for AI-enhanced MR interaction and potential publication opportunities. Ultimately, this workshop will contribute to the development of immersive MR systems that are more intuitive, responsive, and intelligent, ultimately improving user experience and task performance.

loot boxes and (ii) adopted an unspoken policy of giving games with loot boxes a USK 12 (i.e., 'approved for children aged 12 and above') at a minimum. Confirmation of the above has been sought from the USK, and an official reply has been promised and is expected imminently. In addition, the ESRB and PEGI have correctly labelled all games with loot boxes that they assessed in 2023 as containing them, thus giving the public more confidence in the reliability of their age rating information and demonstrating an improvement from their performance in previous years.

9:15 ***Exploring Methodologies to Create a Unified VR User-Experience in the Field of Virtual Museum Experiences***
Rojin Bayat and Elios De Maio (Fondazione LINKS, Italy); Jacopo Fiorenza (Politecnico di Torino, Italy); Massimo Migliorini (Fondazione LINKS, Italy); Fabrizio Lamberti (Politecnico di Torino, Italy)
The emergence of Virtual Reality (VR) and metaverse have opened doors to new research opportunities and frontiers in User-Experience (UX). When it comes to the cultural heritage domain, one of the key concepts is that of the Virtual Museums (VMs), whose definition has been extended through time by many researches and applications. However, most of the studies performed so far focused on only one application, and studied its UX without taking into account the experience with other VR experiences possibly available in the VM.The purpose of this work is to give a contribution for an optimal design to create a unified UX across multiple VR experiences. More specifically, the research included the development of two applications, respectively a VM in a metaverse platform and a virtual learning workshop as an individual application. With this premise, the study will also consider two fundamental elements for an effective UX design: Virtual Environment (VE) and Intelligent Virtual Avatar (IVA). In particular, the latest was developed following current trends about generative AI, integrating an IVA powered by a Large Language Model (LLM).

Presenter bio: Jacopo Fiorenza received the B.Sc. and M.Sc. degrees in Cinema and Media Engineering from Politecnico di Torino University, Italy, in 2019 and 2022. He is a Ph.D. student at Politecnico di Torino, with interests in interactive graphics applications, virtual and augmented reality, and cultural heritage VR experiences.

9:25 ***Deeply Digging in Serious Games for Archaeology***
Vittorio Murtas and Vincenzo Lombardo (University of Turin, Italy)
Over the years, serious games (SGs) - the games whose main objective is not only entertainment - have become a useful tool for teaching, informing, and drawing awareness to significant research topics. A popular application domain is archaeology. Archaeology raises interest in its core activities involving the application of methodologies like excavations and the production of interpretations, which are crucial in reconstructing the culture of ancient civilizations. In the interpretive process, connections with anthropological and historical theories are essential, ensuring the accuracy and authenticity of hypotheses. Archaeological topics can be addressed in the diverse components of serious game architecture: game mechanics, feedback, challenges, narrative, and game setting, with similarities and differences between approaches in similar situations, giving rise to myriad solutions to engage players with archaeological findings and practices. Through a comprehensive analysis of the mapping between archaeological features and game components, the paper contributes to providing insightful information for game design and game studies. In particular, it addresses how space and time are treated in serious games for archaeology and the different roles assumed by the players while engaged in them.

9:40 ***From Entertainment to Mental Health Awareness: The "Debris" Case***
Dalila Martins (University of Aveiro & DeCA, Portugal); Nelson Zagalo and Ana Patricia Oliveira (University of Aveiro, Portugal)
Digital games are increasingly being used as support and treatment tools in the field of mental health. Platforms such as Steam and Playstation already offer game options aimed at mental health, in which developers and consultants work together to convey the reality of patients and reduce stigma. The article presents an analysis of the video game "Debris" in order to understand how the game was designed methodologically and how the story is presented and the "serious" message conveyed. In addition, all the comments on Steam were analyzed to see which dimensions of game design have the most impact on player satisfaction. The analysis showed that "Debris" was designed using a participatory methodology in which the story contains a plot twist at the end, at which point the player understands the game's serious message. In terms of the reviews of the comments, the story and aesthetic dimensions had the most positive comments, while the technology only had negative comments.

Room: Energy Center - Auditorium
Chair: Filippo Gabriele Prattico (Politecnico di Torino, Italy)

10:30 ***Technology and Performing Arts: a human-based approach***
Paolo Arlenghi (Compagnia Pindarica, Italy)
How can Technology improve a live experience in the field of performing arts? How can it be a tool and not the goal of the artistic work? In a human-based approach the starting point of the creative process is the experience lived by the audience, not the goal. :-Pindarica is a multimedia theatre company based in Turin; its research is focused on using technology to enhance the possibilities of human experiences, above all for the youngest generations and in urban and street shows.

CASE STUDY: VisibiLords. A street theatre performance in which a hidden projection system allows performers to make images appears on walls and any surfaces like magic. This generates a "wonder effect" on audience, that is part of the artistic experience. As Arthur Clarke said in "Profiles of the Future: An Inquiry into the Limits of the Possible" (1962): "Any sufficiently advanced technology is indistinguishable from magic"

12:15 ***Designing an Image Classification-based Mobile Learning App About Fruits and Vegetables for Children***
Intan Syazwani Abdul Rahim (Universiti Putra Malaysia, Malaysia); Auzi Asfarian (Bogor Agricultural University, Indonesia); Nurul Amelina Nasharuddin (Universiti Putra Malaysia, Malaysia)
Most people are aware that fruits and vegetables are healthy, but not many are familiar with the differences between them, especially among children. There are considerable differences between fruits and vegetables in terms of size, colour and shape. Mobile apps that can automatically identify Malaysian fruits and vegetables based on images are scarce, and a comprehensive yet children-friendly mobile app that can help children differentiate and identify fruits and vegetables is also limited. This proposed mobile learning app includes a practical and functional interface that will help, especially the younger generations, classify fruits and vegetables based on the uploaded or captured images. Users will be able to read the information about the fruits and vegetables and play mini-games to test what they perceive from this app. There will be more than 30 types of fruits and vegetables that will be classified, and this app will mostly focus on Malaysian fruits and vegetables. A human-computer interaction expert will review the proposed user interface designs to make sure they are appropriate for children after gathering the target users' expectations for the app using a checklist. This app differs from other existing mobile apps in that it focuses more on children, and its development will provide children with convenience by allowing them to learn about eating healthy at any time.

12:25 ***Saliency Map Generation Based on Human Level Performance***
Ehsan Amini (Science and Research Branch, Islamic Azad University, unknown); Saleh Javadi and Siamak Khatibi (Blekinge Institute of Technology, Sweden)
Generating precise saliency maps from eye tracker fixation points is a challenging task influenced by environmental factors and the choice of evaluation metrics. This paper presents a novel, sustainable, scale-invariant, and sampling-independent method for converting fixation points into saliency maps. Leveraging the inherent predictability of human behavior, the proposed method ensures the highest compatibility with the chosen evaluation metric. Moreover, it introduces a mechanism to calculate the maximum achievable similarity score for each conversion. In addition, it offers crucial insights for both saliency map evaluation and the training of machine learning systems dedicated to saliency map generation. Experimental results demonstrate the method's efficacy in producing saliency maps that align seamlessly with diverse evaluation metrics, showcasing its adaptability and predictive capabilities. This approach contributes not only to the refinement of saliency map generation but also to the broader understanding of the intricacies involved in converting eye tracker data into meaningful ground truths.

12:40 ***A Framework for Individual-First and Public-First Planning Considering Individual Preferences in Theme Park Problem***
Atsushi Ueno (Osaka Metropolitan University, Japan); Sho Yoshioka and Tomohito Takubo (Osaka City University, Japan)
The theme park problem is one of the benchmarks for mass user support in dynamic resource allocation problems, where the goal is to increase overall utility. The Statement-based Cost Estimate (SCE), which predicts future queues, is a powerful approach to this problem, but it only aims to minimize the total time spent by all users in the park. The Pareto optimal plans and Statement-based Cost Estimate (P-SCE) relaxes the individual optimality in the SCE and performs global optimization at a central server to further improve the total time, but some visitors tolerate unfair solutions. In the past, we proposed the Weighted-utility and Statement-based Cost Estimate (W-SCE) as a framework for attempting direct optimization of individual visitors, who may have different utilities besides time spent. By incorporating the idea of overall adjustment in the P-SCE into individual optimization of the W-SCE, we can expect further optimization of the overall utility. The framework proposed in this paper aims to further increase the overall utility of the theme park without sacrificing the individual utilities. The framework increases the overall utility by choosing quasi-optimal plans rather than some unfair plans. This maintains a balance between the global and individual optimization. Computer experiments confirm that a plan that takes individual preferences into account is selected. As a result, the overall utility increases, and the total time spent is shortened in many settings.

12:55 ***A Markovian Game Theoretic Framework for Analysing a Queueing System With Multiple Servers***
Pyke Tin and Thi Thi Zin (University of Miyazaki, Japan)
This paper introduces a Markov game theoretic framework designed to analyze a Markovian queueing system equipped with multiple servers. Our focus lies in modelling a message transmission system, where messages traverse various transmission options, each associated with a cost and governed by a decision process. The primary objective is to investigate the impact of cooperation and communication, or the absence thereof, among servers. The interaction uncertainty regarding the characteristics of the available transmission alternatives is mathematically captured through a Markovian game formulation. Within this framework, we quantify the inefficiency resulting from the self-interested management of individual servers and the associated loss attributed to the decision-making process. Our analysis encompasses diverse scenarios of signaling exchange among servers, providing valuable insights into the system's behavior under varying conditions.

13:05 ***A Stochastics Branching Process Model for Analyzing Rumor Spreading in Social Media Networks***
Thi Thi Zin and Pyke Tin (University of Miyazaki, Japan); Hiromitsu Hama (Osaka City University, Japan)
This paper introduces a stochastics branching process model as an analytical tool to study the dynamics of rumor spreading in social media networks. Employing a specialized first-order conditional probability generating function method, we derive a second-order linear regressive equation to characterize the intricate dynamics of rumor propagation. The validation of our model's accuracy is established through a comparative analysis between numerical computations and Monte Carlo simulations. Additionally, we present a derived threshold condition for the spread control factor, also known as the reproduction rate. Numerical simulation results demonstrate that the interactions and responses within social platforms contribute to the rapid onset of rumors while simultaneously diminishing the maximum density of spreaders and the overall scale of the rumors. To provide further insights, we explore analogies between rumor-spreading models and epidemic models. In conclusion, our proposed stochastics branching process model not only enhances our understanding of rumor spreading in social media networks but also offers a valuable framework for investigating the interplay between various factors influencing the dynamics of information diffusion.

Presenter bio: Thi Thi Zin received the B.Sc. degree (with honor) in Mathematics in 1995 from Yangon University, Myanmar and the M.I.Sc. degree in Computational Mathematics in 1999 from University of Computer Studies, Yangon, Myanmar. She received her Master and Ph.D. degrees in Information Engineering from Osaka City University, Osaka, Japan, in 2004 and 2007, respectively. From 2007 to 2009, she was a Postdoctoral Research Fellow of Japan Society for the Promotion of Science (JSPS). She is now a Professor of Faculty of Engineering, University of Miyazaki, Japan. Her research interests include human behavior understanding, ITS, and image recognition. She is a member of IEEE.

12:15 ***Difficulty Evaluation of Yoga Poses by Angular Velocity and Body Area Calculation for GPU-Based Yoga Self-Practice System***
Cheng-Liang Shih and Jun-You Liu (National Chung Hsing University, Taiwan); Irin Tri Anggraini, Yanqi Xiao and Nobuo Funabiki (Okayama University, Japan); Chih-Peng Fan (National Chung Hsing University, Taiwan)
In this study, an extended difficulty evaluation functions of Yoga self-practice system, which is based on OpenPose, is developed by using human skeleton detection. The Yoga self-practice system implements on the NVIDIA GPU-based embedded platform and utilizes the output results for subsequent Yoga self-practice applications. In addition to providing user's Yoga motion guidance, practice options, and user's feedbacks, the self-practice system also offers a difficulty selection function. In this work, two different difficulty assessment methods are proposed in comparison with previous designs, and two indicators for evaluating the difficulty of Yoga poses are introduced. Firstly, angular velocity calculations are used to perform the dynamic and static regions of each instructor's Yoga motion by assessing the magnitude of pose changes in terms of angles during dynamic and static regions. This facilitates the evaluation of difficulty based on angular and temporal analyses. Secondly, the body area enclosed by four key joints of the upper and lower body is calculated to enhance the credibility of the difficulty analysis through the area comparisons. The research provides a series of difficulty analysis and experimental results for instructor's Yoga poses.

Presenter bio: Chih-Peng Fan received the B.S., M.S., and, and Ph.D. degrees, all in electrical engineering, from the National Cheng Kung University, Taiwan, R.O.C., in 1991, 1993 and 1998, respectively. During October 1998 to January 2003, he was a design engineer with N100, Computer and Communications Research Laboratories (CCL), Industrial Technology Research Institute (ITRI), Hsinchu, Taiwan. In 2003, he joined the faculty of the Department of Electrical Engineering, National Chung Hsing University, Tai-chung, Taiwan, where he is currently a full Professor. He has published more than 80 technical journals and conference papers. His teaching and research interests include digital video coding, digital image processing, VLSI signal processing, and baseband transceiver design and implementation.

12:30 ***A Gamified Framework to Assist Therapists With the ABA Therapy for Autism***
Matteo Cordioli (Politecnico di Milano, Italy); Laura Delfino, Alessia Romani and Elisa Mortini (Spazio Autismo Cooperativa Sinergie, Italy); Pier Luca Lanzi (Politecnico di Milano, Italy)
We present a framework to assist therapists and children with autism spectrum disorder in their Applied Behavioral Analysis (ABA) therapy. The framework was designed in collaboration with Spazio Autismo, an autism center in Mantova, Italy. The framework is a first step toward transitioning from the current paper-based to fully digital-supported therapy. We evaluated the framework over four months with 18 children diagnosed with classic autism, ranging from 4 to 7 years old. The framework integrates a mobile app that children and therapists use during the sessions with a backend for managing therapy workflow and monitoring progress. Our preliminary results show that the framework can improve the efficacy of the therapy sessions, reducing non-therapeutic time, increasing patient focus, and quickening the completion of the assigned objectives. It can also support therapists in preparing learning materials, data acquisition, and reporting. Finally, the framework demonstrated improved privacy and security of patients' data while maintaining reliability.

12:45 ***A Design of Handgrip Exergame System for Hypertension Prevention***
Irin Tri Anggraini, Yanqi Xiao and Nobuo Funabiki (Okayama University, Japan); Cheng-Liang Shih, Jun-You Liu and Chih-Peng Fan (National Chung Hsing University, Taiwan)
Currently, the high blood pressure or hypertension becomes the most serious risk for people around the world. According to the World Health Organization (WHO), approximately 1.28 billion people at 30-79 years old are estimated to suffer from hypertension. It is known that isometric handgrip exercises using a foam ball can control the blood pressure. Then, a simple exergame system of performing exercises while playing video games is essential to motivate people, particularly seniors, for their health. In this paper, we design a handgrip exergame system as a low cost one requiring only one standalone PC with a camera. The handgrip gestures for the game control are defined and will be recognized by Mediapipe. The preliminary implementation using one simple game is also presented. The practical implementation and evaluation of our proposal will be in future works.

Presenter bio: Chih-Peng Fan received the B.S., M.S., and, and Ph.D. degrees, all in electrical engineering, from the National Cheng Kung University, Taiwan, R.O.C., in 1991, 1993 and 1998, respectively. During October 1998 to January 2003, he was a design engineer with N100, Computer and Communications Research Laboratories (CCL), Industrial Technology Research Institute (ITRI), Hsinchu, Taiwan. In 2003, he joined the faculty of the Department of Electrical Engineering, National Chung Hsing University, Tai-chung, Taiwan, where he is currently a full Professor. He has published more than 80 technical journals and conference papers. His teaching and research interests include digital video coding, digital image processing, VLSI signal processing, and baseband transceiver design and implementation.

12:55 ***Virtual Rehabilitation: XR Design for Senior Users in Immersive Exergame Environments***
Vassilis Charissis (Edinburgh Napier University, United Kingdom (Great Britain)); Soheeb Khan (University of the West of Scotland, United Kingdom (Great Britain)); Samar Altarteer (Dar Al-Hekma University, Saudi Arabia); Ramesh Lagoo (Core Lab plus Ltd, United Kingdom (Great Britain))
The global ageing population presents significant challenges, with healthcare systems strained to meet the needs of an increasingly elderly demographic. Societies face issues related to healthcare costs, caregiving, and maintaining quality of life for seniors. This paper investigates the impact of a prototype Virtual Reality (VR) exergame application designed for musculoskeletal exercise and rehabilitation of senior users. The XR system employs an omnidirectional treadmill that combines VR with physical activity, offering immersive experiences while engaging in therapeutic exercises. This application provides an opportunity to senior users, to stay active whilst in the comfort of their home. The application has been evaluated by ten users providing encouraging results. The paper concludes with the presentation of the results and a future plan to further explore the immersive nature of VR and its impact on enhancing motivation and promoting better overall well-being for the senior population.

Presenter bio: Professor Vassilis Charissis BSc (Hons), MPhil, PhD, MIET, FBCS, FRSA, FDSRI, SFHEA, is currently a Professor of Creative Technologies (VR/AR, AI, UX, UI) at Edinburgh Napier University. Prof Charissis was previously the Director and Founder of the Virtual Reality and Simulation Laboratory (VRS Lab), Virtual Reality Driving Simulation Laboratory VRDS (Lab) and Research Leader of the Visual Affective and Pervasive Research Group (VAPS). His research interests are in the areas of HCI, VR, AR, HUD, AI, Simulation, Human Factors, User Experience Modelling, Serious Games and User Behaviour. During his research career, Prof Charissis has developed systems for QinetiQ, Ford, FIAT Group, Lancia, Alfa Romeo, Opel, Fisher Defense Submarines, NES, NHS Trusts, RCSEd and RCPSG amongst others. His research produced an extensive track record of international scientific publications.

13:10 ***Virtual Reality Multiplayer Experiential Training: Guiding People with Autism Towards New Habits***
Nicolò Fumero, Vittorio Fiscale, Alessandro Clocchiatti and Agata Marta Soccini (University of Torino, Italy)
Individuals with Autism Spectrum Disorder, at a certain point in their lives, may spend their days in Day Activity Centers. Approaching this habit for the first time is an everyday life change that can often be confusing and overwhelming. To support people during this transition, we propose a virtual reality application based on an immersive and interactive digital twin of an existing center in the city of Torino, Italy. In the virtual environment, users can try several times the experience before facing it in the physical world, following an experiential training approach, with the goal of making the adaptation smoother and alleviating anxiety. In virtual reality, users can explore the space and perform some of the activities available in the center, guided by a virtual avatar, that is controlled by a caregiver. In the current work, we report a preliminary system validation to assess usability by considering several factors, including user experience, sense of presence and negative effects. Our findings suggests positive scores for all the considered parameters.

13:25 ***Extended Reality & Virtual Reality for Return-To-Sports Screening***
Glenn Van Wallendael (Ghent University - imec, Belgium); Julie Artois (Ghent University - imec, Belgium); Hannes Mareen (Ghent University - Imec & IDLab, Belgium); Robbe Capelleman, Joke Schuermans and Evi Wezenbeek (Ghent University, Belgium); Peter Lambert (Ghent University - imec & IDLab, Belgium)
Anterior cruciate ligament (ACL) injuries are common in sports such as soccer, often requiring extensive rehabilitation post-surgery. Return-to-sport (RTS) rehabilitation protocols typically involve clinical and kinematic evaluations to ensure safety. This study investigates the added value of Extended Reality (XR) and Virtual Reality (VR) on movement quality during RTS assessment of male soccer players post ACL reconstruction, compared to healthy control players. Our XR tests were performed using a projection on a big screen on 11 male soccer players with a soccer-related ACL tear. Additionally, our VR tests were performed using a Head Mounted Display (HMD) on 31 male soccer players, including 14 with ACL reconstruction and 17 healthy control players. We performed clinical tests and kinematic analyses with statistical comparisons between testing conditions. The utilization of XR seems to elicit the mechanism associated with ACL rupture more significantly, suggesting its potential value in incorporating XR into RTS screening and rehabilitation protocols. Analysis of the VR-results revealed greater knee flexion and valgus range compared to non-VR, demonstrating VR's potential for enhanced kinematic sensitivity. As such, VR-based kinematic analysis may improve sensitivity in detecting movement deviations during RTS evaluations post-ACLR. Further research is needed across diverse athletic populations. In conclusion, this study highlights the potential for both XR and VR applications in identifying ACLR-related deficits, and motivates their integration with conventional clinical RTS screening batteries.

Presenter bio: Hannes is a Postdoctoral Researcher at IDLab-MEDIA. Ghent University - imec Belgium. He obtained the M.Sc. degree and PhD Degree in Computer Science Engineering from Ghent University - imec, Belgium, in 2017 and 2021, respectively. His research interests cover multimedia compression, security, and forensics.
