**Annealed Cyber Resiliency: Cyber Discernment for the Launch Providers of Space Systems**

**Authors:**

**Keywords:** space systems; strategic infrastructure; critical infrastructure; advanced persistent threats; outside-the-wire

**Abstract:**  
Out-of-the-box and outside-the-wire thinking is required to identify sophisticated synthetic aberrations, which would bypass prototypical cyber defense systems. The various tools and techniques are somewhat important within the ecosystem, but an assessment methodology that embodies diligence, persistence, and learning over time can be even more vital than the various tools and techniques. This paper posits that the depth and breadth of any cyber investigation foray can well be achieved by employing an approach that is termed Cyber Discernment. In Cyber Discernment, a methodological robust decision engineering framework, Karassian Netchain Analysis (KNA), among others, is utilized to understand Negative Influence Dominating Sets (NIDS) or areas of instability and Positive Influence Dominating Sets (PIDS) or islands of stability. By ascertaining PIDS and understanding how best to mitigate NIDS, a form of annealed cyber resiliency, enhanced cyber security, and latent cyber stability can be achieved, thereby mitigating against unintended consequences, undesired elements of instability, and "perfect storm" crises lurking within the system.
