Abstract:
The Artificial Intelligence (AI) coherence (and concomitant AI hallucination) issue, which centers upon the issue of validity among others, remains an ongoing challenge, and current mitigation methods have had limited efficacy for certain Large-Language Model (LLM)-based systems. This paper reviews the aforementioned points and presents some experimental comparing of certain similarity measures along with AI-centric heuristic coding (generating in an endeavor to operationalize pathways that: (1) tend towards the monotonic arena, and (2) are, correspondingly, less likely to open towards the Non-deterministic/Polynomial-time Hardness (NP-hard) non-continuous, non-polynomial, non-monotonic side.

Keywords: Artificial Intelligence; Conversational AI Agents; AI Hallucinations; AI Coherence; Graph-Based Reasoning; Case-Based Reasoning; Analogical Reasoning; Isomorphism.
